## Chapter 1: The Mongod

### Lab - Configuration File

---

[Back to the Question](#)

The configuration for this mongod is the same as the previous lab, but the settings should be passed in a configuration file instead of the command line. Here is an example of a valid config file for this lab:

```
storage:
  dbPath: /data/db
net:
  bindIp: 192.168.103.100,localhost
  port: 27000
security:
  authorization: enabled
```

COPY

Again, `localhost` is an alias for `127.0.0.1`, so they can be used interchangeably.
