Chapter 1: Driver Setup

Ticket: Projection

[Back to the Question](#)

Here's a possible implementation of the **getMoviesByCountry** method:

COPY

```
public List<Document> getMoviesByCountry(String... country) {  
  
    Bson queryFilter = Filters.in("countries", country);  
    Bson projection = Projections.include("title");  
    List<Document> movies = new ArrayList<>();  
    moviesCollection  
        .find(queryFilter)  
        .projection(projection)  
        .iterator()  
        .forEachRemaining(movies::add);  
    return movies;  
}
```
