

Enable Geographical Visualizations

MongoDB Compass uses a 3rd party plugin for the geographical visualization of geospatial fields in your documents.

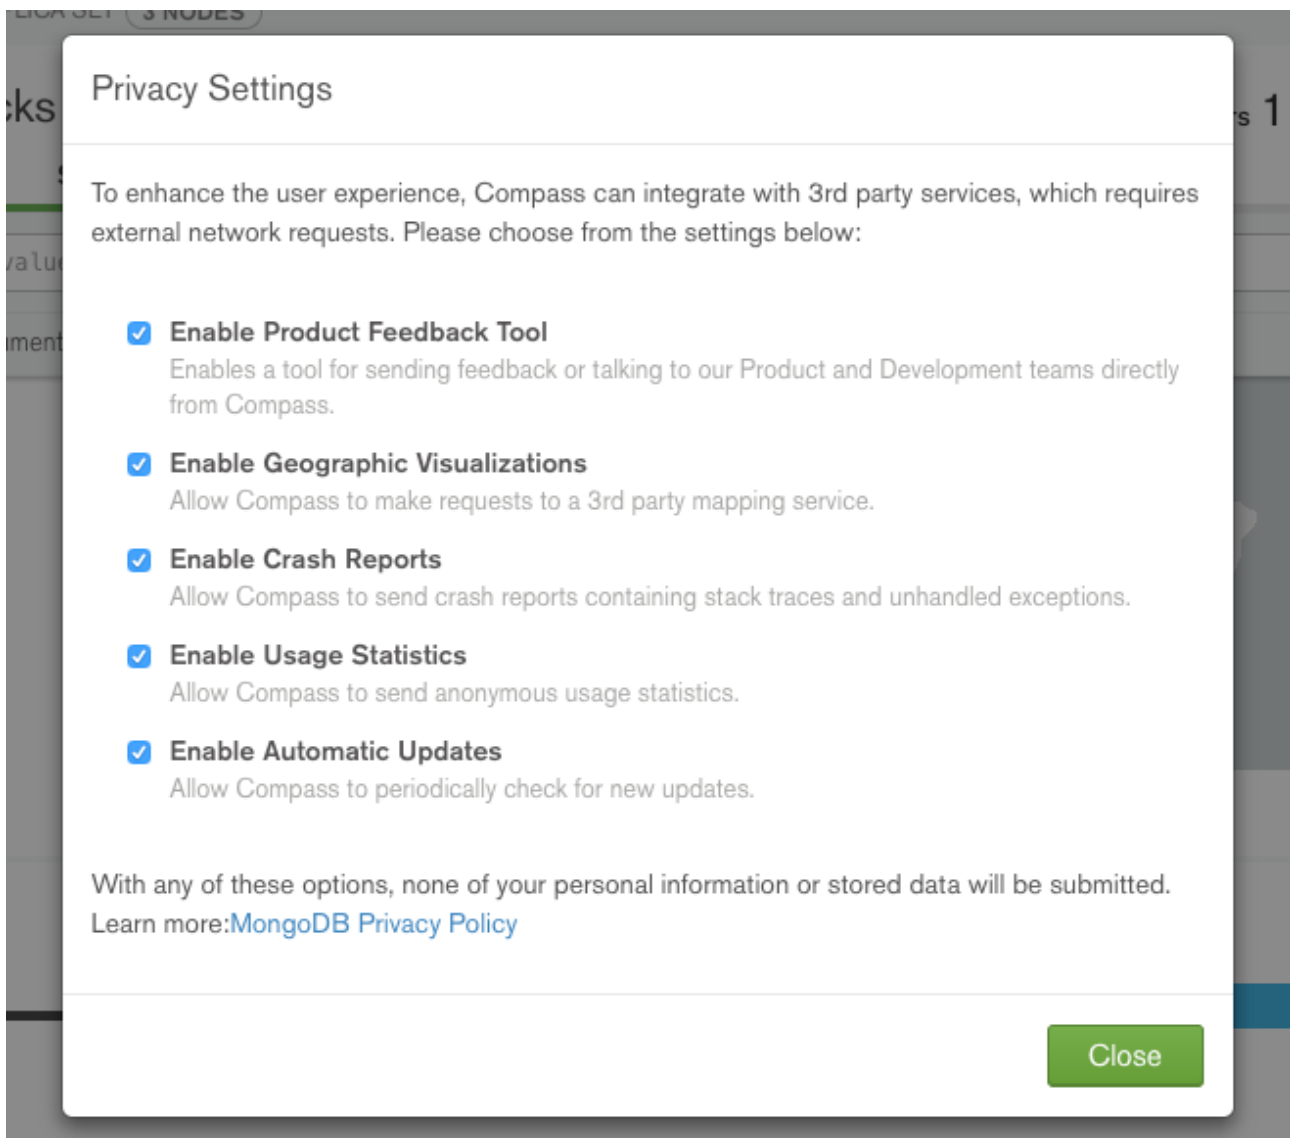

If you are not able to see a map box in your Schema tab, when analyzing the coordinates field of ships.shipwrecks, you should check the option to enable geographical visualization.

To do that you will have to click on the menu:

Help -> Privacy Settings

COPY

and then enable this feature.

Notes*

- Correction. In the video above the database name is named "100YWeather", it should be "100YWeatherSmall".
