

To connect to M121 course [Atlas Cluster](#), using the mongo shell, you will need to use the following connection command:

```
mongo "mongodb://cluster0-shard-00-00-  
jxeqq.mongodb.net:27017,cluster0-shard-00-01-  
jxeqq.mongodb.net:27017,cluster0-shard-00-02-  
jxeqq.mongodb.net:27017/aggregations?replicaSet=Cluster0-shard-0"  
--authenticationDatabase admin --ssl -u m121 -p aggregations --  
norc
```

Once you've connected, list the existing collections of the aggregations database. Your output should be similar to this one:

```
Cluster0-shard-0:PRIMARY> show collections  
air_airlines  
air_alliances  
air_routes  
bronze_banking  
customers  
employees  
exoplanets  
gold_banking  
icecream_data  
movies  
nycFacilities  
silver_banking  
solarSystem  
stocks  
system.views
```
