Final Exam

M312 Final Exam, Question 1

Problem:

Which of the following is/are true of performance drops in MongoDB?

Attempts Remaining: **Correct Answer**   

Check all answers that apply:

☒ `db.currentOp()` can be used to find long-running processes.

☐ If the `.explain()` plan is showing that a query is using an index, then that query has definitely been fully optimized.

☒ Background index builds may result in a drop in performance.
