

Final Exam

Final: Question 3

[Back to the Question](#)

Correct Answers:

- `readConcern.asDocument().toString() = "{ }"`

COPY

No read concern was passed to the settings.

- `readPreference.toString() = "primary"`

COPY

Despite not setting a **readPreference**, the driver will force the value to **primary**

Invalid Answers:

- `sslSettings.isEnabled() = false`

COPY

This is the setting that reports if SSL is on or off for this connection. When connecting to Atlas, you will need to use either a *hostname and ssl=true*, or you will need to provide an URI with an SRV record (what we asked you to do), which will imply *ssl=true*

- `writeConcern.asDocument().toString() = "{ w : 1 }"`

COPY

Despite `w : 1` being the default, the connection will not have any value in this settings.

- `sslSettings.isInvalidHostNameAllowed() = true`

COPY

By default, this is false. Take care before setting this to true, as it makes the application susceptible to man-in-the-middle attacks.
