Chapter 4: Patterns (Part 2)

Other Patterns

Problem:

A pharmaceutical company needs to implement a design to model the relationships between the company and its partners, customers, and suppliers. A team came up with a design that works perfectly, meeting all performance requirements. However, when loading the real data in the system, they realized that one customer, the U.S. government had too many contacts to be stored into the designated array for this information.

Instead of redesigning the whole system to make this customer fit well into the new data model, which pattern can you use?

Attempts Remaining: **Correct Answer**

Choose the best answer:

☐ The Schema Versioning Pattern.

☐ The Attribute Pattern.

☐ The Subset Pattern.

☒ The Outlier Pattern.

☐ The Pharmaceutical Pattern.

Correct!
