Final Exam

Final: Question 7

[Back to the Question](#)

Correct Answer

```
coll.find().sort(orderBy(descending("height"))).skip(3)
```

COPY

This will sort on height, and then skip the top 3 tallest people to get the 4th- and 5th-tallest people.

Incorrect Answers

```
coll.find().sort(orderBy(descending("height"))).limit(5)
```

COPY

MongoDB will rearrange the order and execute the **skip** before the **limit**. So this query, will sort on height, skip the first 3 and then limit to the top 5 tallest people. It will still return 5 documents after the **skip**.

```
coll.find().sort(orderBy(descending("height"))).skip(3)
```

COPY

This will sort on height, skip the top 3 tallest people, and then return the 4th, 5th, 6th, 7th and 8th-tallest people.

```
coll.find().sort(orderBy(descending("height"))).skip(5)
```

COPY

This will sort on height, skip the top 5 tallest people, and then return the 6th, 7th, and 8th-tallest people.
