Chapter 3: Auditing and Best Practices

Example of DDL audit filter

Problem:

Which of the following audit filters will allow us to monitor the creation of collections on databases that begin with "university"?

Attempts Remaining: **Correct Answer**

Check all answers that apply:

☐

```
{ atype: "createCollection", "param.ns": /university.*/ }
```

☒

```
{ atype: "createCollection", "param.ns": /^university/ }
```

☒

```
{ atype: "createCollection", "param.ns": /^university.*/ }
```

☐

```
{ atype: "createCollection", "param.ns": /university/ }
```
