## Chapter 3: Auditing and Best Practices

### Log Redaction Setup

---

#### Problem:

In the case of a replica set or shard cluster we need to:

Attempts Remaining: **Correct Answer**

Check all answers that apply:

☐ Running command `db.adminCommand({setParameter:1, clientLogRedaction: 2})` forces all members of a cluster to redact their log client data.

☒ Enable log redaction on all data holding members and **mongos** elements

☒ Setting the system flag **security.redactClientLogData**, in MongoDB configuration file, is the recommended setup guarantee that on reboot log redaction will be enabled.

☐ Users can bypass log redaction by emitting write concern flag `{r:0}` in their write operations
