Chapter 1: Authentication

Homework 1.4: Migrating MONGODB-CR to SCRAM-SHA-1

[< Back to the Question](#)

This homework should have been pretty straightforward, as it is directly related to the lesson on migrating from MONGODB-CR to SCRAM-SHA-1. All you need to do is connect to the running **mongod** and issue the following commands from the **mongo** shell.

```
use admin
db.adminCommand({ authSchemaUpgrade: 1 })
```

COPY

You can easily verify the success of the migration by looking at Alice's user in the **system.users** collection and confirming that **SCRAM-SHA-1** has replaced **MONGODB-CR** under her credentials.

```
db.system.users.findOne({ 'user': 'alice' })
```

COPY
