

Chapter 5: Conclusion

Final Exam: Question 6

Problem:

Consider a system that collects census data on all countries in the world.

Which of the following implementations are recommended ways to model a One-to-Zillions relationship between a person entity and the country entity in which that person was born?

Attempts Remaining: Correct Answer   

Check all answers that apply:

- ☐ Referencing from the One side.

In the document for a country, we have an array of references to the documents of the people who are kept in a separate collection.
- ☐ Embedding as an array.

In the document for a country, we embed all the people born in that country.
- ☒ Referencing from the Zillions side.

In each person document, we reference the corresponding country document.
