

Final Exam

Question 7

Problem:
Which of the following statements is/are true?

Attempts Remaining: **Correct Answer**   

Check all answers that apply:

☐ When enabling internal authentication between the members of a replica set both certificate and key must be present in the CA, client, and server PEM files.

☒ MongoDB stores user-defined role information in the `system.roles` collection in the `admin` database.

☐ The `preferSSL` SSL mode allows the server to accept both TLS and non-TLS connections between *both* clients and other members.

☒ When auditing is enabled on MongoDB Enterprise, the `--auditFormat BSON` option has much better performance than the `--auditFormat JSON` option.

☒ The subject of a client certificate acts as the "user" when authenticating with X.509 certificates.
