## Chapter 2: Tooling Overview

### Lab: Analyze Log Components

---

[< Back to the Question](#)

The expected answer is:

NETWORK

COPY

Our **singleapp.py** tries to establish more connections than the **single.cfg** file allows:

```
...
net:
  port: 27000
  maxIncomingConnections: 10
...
```

COPY

To fix this issue we would either increase the number of incoming connections allowed, or just reduce the number of processes launched by our script.
