Chapter 5: Conclusion

Final Exam: Question 3

< **Back to the Question**

Correct Options

- `stores.name` and `stores.city`

- `stores.name` and `store_details.description`

- `stores.address` and `store_details.manager.name`

  Because our entities **stores** and **store_details** are joined by a One-to-One relationship, it does not matter in which of those two entities the fields are located.

  What matters is that a field is not within an array field, which are our only fields representing One-to-Many relationships.

  All the above options have a One-to-One relationship between the pair of fields.

Incorrect Options

- `store_details.name` and `store_details.staff.name`
- `stores._id` and `store_details.services`
- `store_details.manager.employee_id` and `store_details.staff.employee_id`
- `stores.name` and `store_details.staff.name`
