Chapter 1: Basic Aggregation - $match and $project

Lab - $match

You can use nearly all of the familiar query operators in `$match`. We filter documents, retaining only those where the `imdb.rating` is 7 or more, `genres` does not include "Crime" or "Horror", the value for `rated` was "PG" or "G", and `languages` includes both "English" and "Japanese". .. code-block:

```
                                                    COPY
var pipeline = [
  {
    $match: {
      "imdb.rating": { $gte: 7 },
      genres: { $nin: [ "Crime", "Horror" ] } ,
      rated: { $in: ["PG", "G" ] },
      languages: { $all: [ "English", "Japanese" ] }
    }
  }
]
```
